

## Questions and Answers – May 11, 2023

### (RFP) INRM-024: RESTORE Social Data Baseline Assessment.

1. Will this be a randomized controlled trial?

No, this is not a randomized controlled trial. There may be aspects of this evaluation that are based on quasi-experimental methods.

2. The RFP mentions that households for the surveys will be randomly selected. Who will do this selection? If the DAI team, will they share names and contact details with the awardee?

The supervisor of the enumeration team will do the random selection of households in each community. DAI will not have any information on local households prior to fieldwork. If the selected firm does not have the in-house capability, DAI can work with the contractor to develop a randomization tool for the field teams to use for household selection.

3. What software will DAI use to program the questionnaires and does the awardee have to pay for using it?

DAI will use SurveyCTO. The awardee does not need to pay for the SurveyCTO account but will need to download the software on the electronic devices.

4. What is the timeline for finalizing the survey questions and providing the awardee with a draft programmed instrument for bench testing?

DAI will provide the questionnaire the first week of contract signing for comments and translation (week 1). DAI will revert the draft programmed instrument one week after receipt of comments and translations or pre-testing (week 3). Pre-testing will be planned at least 2 weeks before the launch of fieldwork (week 5).

5. What is the timeline for providing the awardee with the final programmed instrument?

After pretesting and training, DAI will provide the final programmed instruments to update on SurveyCTO before the field teams depart for fieldwork.

6. Kindly share with us the attachments indicated in page 14 of the RFP.
