

The Supplier Registration Portal (SRP) is an online platform that creates business linkages between local suppliers and buyers, and helps foreign suppliers form alliances with local vendors to access protected local markets.

## What is the Supplier Registration Portal?

The Supplier Registration Portal is a proprietary software delivered by DAI's Sustainable Business Group to operators of large-scale capital projects in order to more effectively manage their supply chains. It leverages technology to build and strengthen networks in supplier management globally. For buyers, it serves as a digital platform for those looking to streamline their supplier discovery and engagement and optimize their social license to operate. By configuring the portal to map to local requirements, including the option to make it available in local languages, buyers are able to ensure that they reach local businesses where they are working.

# The portal does this by providing four main key features:

## Communication

The SRP provides suppliers and buyers a platform for communication. Buyers can easily contact cohorts of potential vendors through the SRP using integration with email and SMS campaigns. This provides a simple solution for any time a company wants to reach out to large groups of potential suppliers with information, updates, and upcoming tenders.

## Data Management

Every user in the SRP enters detailed data about their business to generate a supplier profile, configured to the local country context. This data can be easily managed in the SRP using built-in search, sort, and filter functionality. The SRP also allows buyers to export supplier data for detailed analysis.

## Supplier Resources

The SRP provides a centralized, user-friendly place to share supplier resources. Users can search for relevant tender notices and trainings that can help connect them to business opportunities. These resources help local businesses to enter international supply chains while showcasing the local goods and services that can promote valuable partnerships between local suppliers and buyers.

## Opportunities

Buyers can post procurement documents and provide opportunities targeting local businesses. The SRP allows you to share Expressions of Interest (EOIs), Requests for Information (RFIs), Requests for Proposals (RFPs), and other procurement information with the entire list of registered suppliers or target a specific industry.

SBG offers a line of services to help users of the SRP get the most utility out of the system. This includes training, which can be delivered remotely or in-person, to ensure that all users are comfortable operating the SRP. SBG also hosts local registration events to boost interest, awareness, and participation in supplier development programs and to generate more users.
